As I mentioned earlier, Adobe has worked on being very open about its machine learning technology. For "Deep Learning," which Adobe calls AI, all of the intelligence is done on a centralized server (read: you won't have to deal with a mysterious "AI" in the future). But for Photoshop CC, you have very specific options to use them. For example, the Photoshop "Trusted Workspace" allows you to select one of two modes with the new "Inference" panel: Premium and a forthcoming free version. The premium part gives your expertise greater weight in whether corrections are done in real-time or at least with some of the less obvious (but still significant) corrections done in batch mode. In the "Free mode," the corrections are done in batch. The obvious advantage is that you are free to choose your corrections with a lot more flexibility than if you are working in the custom workspace that Adobe has created for Photoshop CC. But there are some restrictions in the "Free mode" that can be a little awkward, such as being unable to save the file under a different name (or keep some metadata in the file without changing the filenames), are greeted with a warning when they choose the "Premium" workspace or a choice. It sniffs that you are tinkering with settings that you should full be careful about. For example, P3 (D-Pictures) files are compatible with the "Premium" Inference panel, so you can shoot there as well. But updating images to new file formats in the "Premium" workspace is not possible, and you cannot save JPEG images intended for print in the "Premium" workspace, so even though it gives you a free option, I don't believe I would personally use the "Premium" workspace.

A month has passed since we had Photoshop Lightroom CC version 2018 and since now there is Photoshop Lightroom CC version 2018 that is a major upgrade. Apart from the above, there are two more features in this version, which will definitely attract the users. The first feature is that in the recent version, you can handle time-lapse footage while editing and also adjust it to normal footage in RAW format. The other is that you can add keywords to the footage and adjust the data. This prevents the footage from being added to the end of the movie except the position data. • New features and updates to class version such as Camera Awesome and the Video Editor (used for making video documentaries or short films where people can record a video and add special effects to the footage, motion graphics, etc.). The initial plan was to cover only the top features, just the most important ones. After getting the information from the students in my course, and following their comments and corrections, I decided to cover more basic and advanced topics to cover the most comprehensive Photoshop course possible. This Photoshop course has only a limited collection of images in the preceding chapter thereby making the lectures, lectures, exercises and exercises on the features. The complete, detailed course that covers the Photoshop features is under four volumes that I have distributed for free.
