Thanks to the recent update, Photoshop now includes color space management based on ProPhoto RGB. This means that you get the “best” color space in your editor when managing your files, so get ready to appreciate how well the new profiles and profilespaces truly work. Match your exposure and white balance, the way you want, and all is well and good. If you start finding yourself making changes on an image and coming back to the preview only to find the colors have changed, you can undo that change without the rest of the file reverting, or applying DRW (Digital Retouching Workflow), and undo that change without the rest of the file reverting. It makes the process very user-friendly.

After switching from Lightroom to Photoshop, I've discovered that the more my Lightroom catalog has grown, the more I've come to rely on its ability to organize and manage that content. But I've also discovered that sometimes, the different tools in Photoshop are better suited to perform the tasks I need for certain images—especially complex or creative ones. After all, I don't always work with the same styles of imagery. There are plenty of situations where having the flexibility to create my own styles in Photoshop, or build upon the existing ones, is far more useful to me than having the depth of content management in Lightroom that I've grown accustomed to.

To achieve the results you want in Photoshop, you must first decide how your artwork will be composed. That means creating a *layer hierarchy*—a structure that will show the order in which Photoshop processes your images—as well as layering the colors you want for each underlying layer—or every square of color that makes up your artwork. You can also apply special effects to individual layers and change their opacity, blend modes, and more.

Photoshop opened my eyes to the world of digital imaging and changed my career. I have been able to create my own content for a long time, however I remember the days of using some very expensive program that would cost \$19.95. Not only does Photoshop save so much time, but the program has made my life so much easier. It is an amazing program and I can no longer imagine working without it.
