Thanks for any tips. A: I had the same problem, try to add the following to the `cassandra.yaml` file: `listen_address: :A`: In the Cassandra version 3.11.x use the `cassandra.yaml` file instead of `cassandra.conf` file. So change all the data in `cassandra.conf` file to `cassandra.yaml` file. And set the `listen_address` in `cassandra.yaml` file. For example: `listen_address: 1.2.3.4` Then you have

One of the things I like the most is that the [...] number well beyond the expected for any random ISM component (Fig. \isrmagnetic\]). This allows us to rule out a cosmic-ray source as the origin of the 21-cm signal. - An orthogonal polarization mode for the 21-cm signal of about 20 per cent of the total detected is a natural consequence of the elliptical structure of the galaxy, the gas being concentrated in the centre. It is also consistent with the smooth features observed in the ISM and starburst signatures (Fig. \rest\]). The fact that this component is time-variable and follows a different pattern of polarization makes it a valuable probe of the dynamics of the ISM within the merging galaxies. - The global magnetic field is predominantly normal to the optical disc axis of the galaxy, with a median gradient of about \$pm 20\degr\$ over the inner 250 pc, indicating that the field is strongly amplified as the gas falls inwards, and consistent with a dynamo mechanism. There is, however, a deviation from the global trend inside about 50 pc
