So, why not make your own homemade sauce instead of spending all that money on the store bought stuff? I mean, it's true...the price difference is not only reasonable, but it's better for you, too. You can control what ingredients you use and most importantly, you can make sure you are using the best quality ingredients available! You'll find that using a few basic ingredients in the home kitchen, can add so much flavor to your pasta. It's really simple and easy. And, the best part? You can use it over and over again. Think of all those kids who may be watching over you as you are making your sauce. They don't need to know how to cook, they need to know how to cook healthy, so having a good repertoire of simple, healthy recipes is a great way to teach them. So, let's start with some of our favorite ingredients to use in your homemade pasta sauce. 5. Grate or slice the pepper. If you have a food processor, use the grating attachment. If you don't, then grate or slice the pepper with a box cutter or a cheese grater. 6. Place the garlic in a small bowl and drizzle over the olive

Writing Chinese Characters in Unicode: Whether you're curious about how to write a name in Chinese or planning to get a tattoo of a certain symbol, it's important that you have a trustworthy source. Chinese Symbol Studio is a small utility that can be of great help on numerous occasions. The program comes with a clean interface that is easy to figure out, thanks to the intuitive layout. The app can be used in two ways. For instance, you can look for the word you want to translate in the library that comes with the software. The words are filed under various categories, such as female and male names, numbers, horoscope and zodiac, family and relationship, religion and animals, just to name a few. Under each division, there are dozens of entries. Another possibility is to use the app's translator. The only thing you need to do is input the English word and press "Go". The program can display over 100,000 symbols. The symbols may be viewed in three different styles. These are easy to select from a drop-down menu in the upper area of the interface. Also, the color of the symbol and background can be set with great ease, as well as its size. Some effects may be applied by fiddling with several values, such as the angle degree, Alpha levels, Blur, Noise and Spray. A drop shadow may also be added to the symbol. If you want, each image can be saved to one of the supported formats, such as BMP, PNG and EPS or sent to a printer. The bottom line is that Chinese Symbol Studio is a nice program that can be of great help on numerous occasions. Inexperienced users should have no problems in figuring out how the software works. The size of large enterprises — particularly their computer networks — has been growing at an explosive rate, driven in large part by the expansion of cloud computing services. These services are coming from vendors including Amazon.com, Rackspace, Dell and Google, which now accounts for more than 70 percent of enterprise computing, according to market researcher Gartner. Forrester Research predicts that by 2012, the companies using cloud computing services will have a combined computing capacity of 200 billion megabytes of storage. Some analysts are worried that this explosion in the use of cloud computing services poses a threat to businesses' ability to protect data in case of a natural disaster or cyber attack. But others see such concerns as unfounded. Gartner's Bob O'Donnell says businesses that are concerned about being able to cope with a major catastrophe, such as a flood, earthquake, hurricane or terrorist attack, should think about designing business continuity plans that include the cloud. "The cloud vendors are in the 'prepare for anything' business," O'Donnell says. "The question you have to ask is what the risks are that you have to prepare for and are going to expose yourself to." The cloud can make natural disaster recovery much simpler than it has ever been, says Jonathan Litt, the vice president of strategy at the Software Institute. He says that even if a company doesn't have
