\_Attention deficit hyperactivity disorder in a patient with a history of concussion. The etiology and treatment of childhood obsessive-compulsive disorder with onset in late childhood or adolescence are reviewed. A review of associated literature indicates a possible neurochemical basis of the disorder. A case of a 16-year-old adolescent male with obsessive-compulsive disorder with onset in late adolescence who sustained multiple concussions in early childhood is presented. No family history of obsessive-compulsive disorder was noted, and the patient denied any history of head trauma. The authors hypothesize that repetitive head trauma may have triggered a functional aberrance of the central nervous system, resulting in the development of obsessive-compulsive disorder.

\$2\$-Osculi moduli for the 1- and 2-spheres

=====

===== In this appendix we show that the \$2\$-Osculi moduli of the 1- and 2-spheres have vanishing \$U(1)\$-part and can be computed using ( $\int$ ).  
The 1-sphere ----- Let  $l$  be the unit tangent vector in the normal direction of the equator of the 2-sphere. Then  $r=l^2=1$ ,  $ds=1$ , and  $\sqrt{\det(\begin{array}{*{20}c} 0 & 1 \\ -1 & 0 \end{array})} = 1^2 = 1$ , so that  $\delta_a = a l^a$  is the 1-sphere. The directional derivative  $\lambda_{ab}$

given in  $(\lambda)$  is  $-1$  and the normal derivative  $\kappa_{ab}$  is  $l^a l^b$ . The Gauss curvature is  $-1$ .  
By  $(\text{calculoft2})$ , the 79a2804d6b
