In the real world, collaborating in a browser is not a native experience (yet). Collaboration within the browser depends on the devices and platforms that borrowers are using because the browser is first and foremost a browser. With Share for Review, we solve that problem. Share for Review enables a team of editors to work in the browser, and the collaborative editing session is hosted in a shared real-time space in order to provide a seamless editing experience for all participants. Adobe's platform simplifies sharing markup-style text and styles, and layers for assistive editing and rendering tasks. Photoshop subscribers using Adobe Share for Review can also use new text and content analysis features to support more aspects of editing, including readability, style and content assistance, and quickly applying text and content changes to the marking of content. To take full advantage of these new capabilities, users of the Adobe Creative Cloud Suite of creative applications (including Adobe Sketch, Photoshop and Adobe XD) will need to update to the latest version of the desktop application via the Updates application. New full screen Mode assists with viewport changes and allows for useful vertical space management. The Previous and Next Commands can be used to quickly navigate between views that the user has set up. Layers menu displays secondary layers to help the user navigate. The Adjustment panel now includes non-destructive fill tool. Photoshop deletes and fills images in one action, and automatically creates a new one if adjustments are made to content that doesn't belong in the image, such as background style and text. The Fill and Correct selections tool ensures the wrong content is never selected for deletion, and makes a selection so precise it can be adjusted simply by dragging the edge of the selection window. Duplicate Layer, using this new refinement, creates a duplicated layer with a stack effect, and now includes a new option to toggle between stacks in the new History panel. Moreover, Create Clone Layer feature removes an original layer and converts it into a droppable layer that can be edited in a nearby context, such as the Inspector.
