What that all adds up to is that I find Adobe Photoshop CC a really solid photo editing tool with numerous powerful features a beginner can use to swiftly create a few enticing images. I could easily envision this softare as being the backbone of a photography studio, or perhaps to be used at the forefront of a brand's digital marketing efforts.

The one-click deletion tip was a staple of other popular RAW editing programs, so Adobe is no-doubt making this "feature" popular again. It's a quick way to remove any item from an image provided that you have a grid set up on your canvas. It's not exactly Photoshop's favorite feature, but it's pretty darn good.

Although InDesign can be used without the help of tools and features that make up the Adobe Creative Suite, you can also download and install the few tools that are not built-in to Photoshop. Start from the tools found in the **integrated palette** (the tools that you can find in the **Tool Palette**). However, you can still add additional **tools on the fly** by using the **Command** option, as well as create **instant custom tools** that will then appear in the Tool Palette.

What's the best way to kick off my Photoshop review? With a 10 hour shoot. I took this photograph about four years ago of my brother's church in Southern California on a cloudy and rainy day during Sacrament meeting. I was supposed to shoot a short talk for the church in the morning but as anyone that has ever done anything than claimed they are, I messed up. I took this shot and returned the camera to my Mighty Bag and again forgot to take it out and shoot, so I walked out and took a seat and started waiting for Sacrament. I have since followed what could be considered a Parish Guideline and have never shot a Sacrament meeting before. Needless to say I was nervous but I was also pleased to have the opportunity. I have viewed the file countless times since 2004 and am pleased with the way it came out. Now, four years later, I went to Photoshop and have just about completed a face in making his face look more human. I hope it looks better than what I did four

years ago. I'll let you know!

What It Does: The Gradient Map allows you to create a gradient from any point in the image to any other. You can apply it like an overlay effect to make it transparent or lighten or darken a specific area. You can also use this to create radial or elliptical gradients and then filter those layers and place it on any layer!

Let the clouds roll in the sky! I was shooting a long exposure at night here in Cebu. My friend Jeffrey, an engineer was with me. The sky had this beautiful silky blue look to it. We happened to be shooting towards the clouds, which ended up giving a very pretty effect.

We are lucky to live here in Hawaii! Here's the view we went and took from the cliff's edge. I had to sit here and watch for a while to get it to align correctly in ACR. This was a three hour exposure, so that means it took about 16 minutes for the clouds to roll in!

What It Does: The Puppet Warp tool is very useful for warping or distorting the image in real time. You can move the warp point around the image to place it in visually interesting areas of the image and sliding scales let you subtly distort by changing the amount of stretching or shrinking of the image. There are several options to refine the resulting image so it ends up looking as you want it to.

What It Does: The Gradient Fill tool lets you quickly apply gradients or color fills to specific parts of an image – a neat way to quickly copy and paste quick-pix versions of the image.
