As mature as Photoshop Elements is (it must be nearly into its 20s as far as versions), Adobe keeps creating new features to incorporate. Often, Elements is given features before Adobe Photoshop and Adobe Photoshop Lightroom. Many of these new features are a result of Adobe Sensei Artificial Intelligence (AI) that allows otherwise complex manual tasks to be handled automatically. PC hardware is nice, but it's not much use without innovative software. I've been reviewing software for PCMag since 2008, and I still get a kick out of seeing what's new in video and photo editing software, and how operating systems change over time. I was privileged to byline the cover story of the last print issue of *PC Magazine*, the Windows 7 review, and I've witnessed every Microsoft win and misstep up to the latest Windows 11. Related to Libraries are Cloud Documents. Saving your project as a Cloud Document enables you to work on it in the iPad version of Photoshop as well as on other desktops. Cloud Documents are saved instantly and allow collaboration among multiple creators, with the Invite to Edit option. You can also create a link (using the Share for Review beta feature button) to a web-hosted version of the photo where collaborators can comment. Previous versions of cloud documents show up in a Version History panel and even name versions. Cloud documents support offline editing, too. The latest update, which Adobe calls both Version 24 and Photoshop 2023, brings technology announced at the annual Adobe Max conference in October. Highlights include simpler, more accurate Object Selection; One Click Delete and Fill, a new way to remove an object from a scene; and integration with Adobe Express. New features still in beta include Live Gaussian Blur, Live Gradients, a new Neural Filter for photo restoration, and Share for Review—another collaboration feature. For Windows users, a new option lets you choose whether you want auto selection to happen faster or with more stability.
