Adobe Photoshop CC is the latest version of Adobe Photoshop. Admittedly, it seems a lot of skin is in the game in the water-resistant, durability-worthy iPhone seals. I guess the old design is just a little too classy and retro for the 21st century.

When you're choosing a program for editing or creating your images it's always a good idea to look at the number of features that are included and how easy it is to learn the software. As mentioned before, choosing between Photoshop and Lightroom (and the other programs that are mentioned) depends more on what you want to do than what is best.

While we were eager to jump right into learning, it's probably a good idea to first take a course at your local photography or graphics school or work your way through the online tutorials. It can be difficult to learn about Adobe Photoshop if you're just starting out.

It can be tough to name a single best Photoshop for beginners. However, if you're looking at the price, we'd suggest Photoshop or Lightroom. Photoshop is more than just a basic photo editor, and although Lightroom is a good CMS (content management system) for photographers, it doesn't offer the creative features that Photoshop does.

The basic version of Photoshop is probably the best choice for Photoshop beginners because it's the cheapest. It delivers all the basic tools you need, and you can learn to use them quick. The basic program is great for beginners because it is also quite easy to learn. You can customize your color scheme easily and there are many templates and folders in the program.

Lightroom is Adobe's excellent program for photographers to make their photos look great. It's a simple program and functions a lot like Photoshop in that you can use it to make adjustments and add effects, but it can be easier to simply create your edits in Lightroom and export them to Photoshop.
