Catching a thief is a long-term process of tracking and monitoring their whereabouts. This process is time consuming and requires law enforcement to be constantly on the lookout. When you're first browsing Adobe Photoshop's features, and sample image, you'll see a mixed bag of fancy settings that look like they were designed by a developer, while the user interface would almost force you to work with a Photoshop novice. However, with a few tweaks, you can find the features you're looking for. Also, if you're a beginner, you will appreciate the useful tutorial videos. Admittedly, the tutorials may not teach you the nuances of the application, but the tutorials do give you a jumping off point. I was going to write about how it took me five months to use the product, but the first month and a half were spent using the trial version, so this review will be compiled of an initial reaction when I decided to get Adobe Photoshop Camera Raw.

I've got Photoshop CS6 on my Mac, but I haven't been using it very much lately because Photoshop CS5 works fine in the Mac App Store. (Digital Photo Professional is the only other Mac upgrade I've done since I first bought the computer, in 2006. It's free and the current version is 11.0.0.) So for all my photo needs I've been using Photoshop CC on my iPad. It **still** has a few unintuitive features, but the fact that it's an iPad app means I can edit 4K videos and 1080p movies, as well as HD photos. And, it's very convenient to work with and to share. When I spoke recently with the MacPhotog, who does a lot of work in both Photoshop and Lightroom, he said that, in general, more than 5,000 edits per day is the maximum that you can have in Photoshop. But don't let anyone make you think that you can't get more done because you're on new hardware. That's not the case — people who are editing at 5,000 edits per day are editing HD footage onboard an iPhone, and they're delivering that content as it happens.
