Noise reduction has always been a popular feature. Photoshop CC has the most intelligent and powerful noise reduction tools of any image editor I have used. They can build very complex noise templates that can be used as part of other editing in layers. Because of noise reduction, flat toned subjects can look really exquisite. With noise reduction on, you can easily reduce the pop and texture. Other than that, it's a definite plus when the program simulates color adjustments better than any other program I've used. There are many iterations of Non-linear Value based color adjustment tools, yet only Photoshop CC radically improves over them.

Adobe Photoshop has been the choice of graphic designers for over two decades. Some of the most important things to remember about Photoshop are that, the more features you pay for, the more you get. For example, the cheapest plan generally offers just brushes, but for only a small amount, and the standard plan offers all Photoshop features. The other big feature is that the CS versions of Photoshop are the most popular, and anything after is considered a hobby edition.
